I chose Satellite Radio because it offered more variety and programming without commercials. The traffic and weather channels are an added benefit to an already great product. Since obtaining my satellite radio service, 4 family members and 10 friends have signed up to date. It appears that it this will be a popular alternative for many people. Since I am paying for this service, I do not feel that anyone, including the National Association of Broadcasters should have the authority to stop this. Instead of fighting over this, they should put some money and time into improving the quality of local radio. Thank You.
